SUMMARY

Applied AI Engineer and Full Stack Developer with production experience shipping LLM-powered systems, RAG pipelines, and scalable backend services. Co-founded and sole-engineered a consumer platform to **6,300+ registered users with 78% repeat usage**, reaching profitability before a government-mandated regulatory shutdown. Currently building AI-driven content intelligence tools for a distributed team of 50+. Strong ownership mindset, async-first remote workflow, and a proven track record of designing and delivering systems end-to-end without hand-holding.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, C++, SQL, HTML/CSS

Frameworks & Libraries: React.js, Node.js, Express.js, FastAPI, LangChain, CrewAI, Next.js, Tailwind CSS, NumPy, Pandas, OpenCV

AI/ML: LLMs (Gemini, LLaMA, GPT), RAG, Vector Embeddings, Agentic Workflows, Fine-Tuning, AI Evaluation, Whisper, Ollama, Computer Vision

Databases: MongoDB, PostgreSQL, MySQL, ChromaDB, Qdrant

Infrastructure & Tools: AWS (EC2, S3), Docker, GitHub Actions, Git, CI/CD, Vercel, Render, Nginx

Remote & Engineering: System Design, REST APIs, Async Collaboration, Technical Documentation, Code Review, Notion, Jira, Slack

EXPERIENCE

AntarikshTV

Remote (India)

AI Engineer

January 2026 – Present

- Architected a content intelligence system using LangChain, Gemini, and ChromaDB that analyzes 500+ historical videos and live news signals to surface high-potential topics, contributing to a **30–35% lift in average video engagement** measured over 90+ days of production usage.
- Built automated multi-step research agents for a 10-person writing team to retrieve insights from internal video archives, reducing manual research effort and improving script delivery throughput.
- Designed and scaled FastAPI backend services and async data pipelines supporting **50+ concurrent internal users**, maintaining real-time analytics availability and zero-downtime topic recommendation feeds.
- Leading fine-tuning of a domain-specific scriptwriting LLM on 3+ years of proprietary scripts, targeting faster content generation and reduced production overhead.
- Collaborate with a fully distributed team using GitHub, Notion, and Slack, maintaining documentation and code reviews for all shipped features in an async-first workflow.

AntarikshTV

Remote (India)

AI Engineer Intern

November 2025 – December 2025

- Built an internal AI chatbot using LangChain and ChromaDB to query organizational knowledge bases and surface real-time project status and content pipeline insights for the production team.
- Developed a centralized task-tracking platform for content moderation workflows, improving cross-team visibility and contributing to a **~15% improvement in tracked team output** over the 2-month engagement.
- Shipped internal coordination tooling to streamline communication across a 50+ member distributed production team, establishing async engineering practices from day one.

RBLottery

Remote (India)

Co-Founder & Founding Engineer

March 2025 – September 2025

- Co-founded and sole-engineered a full-stack digital lottery platform from zero using the MERN stack (MongoDB, Express, React, Node.js), JWT authentication, role-based access control, and Tailwind CSS.
- Scaled the platform to **6,300+ registered users with a 78% repeat usage rate**, reaching profitability within months as the only engineer on the team.
- Architected REST APIs with Express.js and MongoDB, implemented admin/user/moderator access control, and deployed production infrastructure on Hostinger and Netlify with 99%+ uptime.
- Shut down in September 2025 following the Government of India's Online Gaming Regulation Bill (August 2025), which banned all forms of digital lottery nationwide — not due to product or business failure.

PROJECTS

- CapTon AI** | *Multi-Agent Content Generation Platform* | CrewAI, LangChain, LLMs, Streamlit | [Deployed App]
- Built a production-ready multi-agent platform using CrewAI that converts long-form video scripts into SEO-optimized captions, hooks, hashtags, and social media descriptions via coordinated analyzer and writer agents.
 - Designed structured JSON contracts between agents and integrated live web-based SEO context retrieval into the generation pipeline, enabling creators to produce multiple content variants per script rapidly.
 - Deployed on Streamlit Community Cloud with real-time backend-synchronized workflow progress tracking and a UI purpose-built for non-technical users.
- MADHAV** | *RAG AI Assistant Grounded in the Bhagavad Gita* | FastAPI, React, Gemini, LangChain, ChromaDB | [Live]
- Built a retrieval-augmented AI assistant that vectorizes 700+ Bhagavad Gita verses into ChromaDB, achieving **95% contextual retrieval accuracy** evaluated against a 100-query benchmark set.
 - Engineered a FastAPI backend and React frontend; achieved **<950ms average query latency** on cloud hosting under concurrent load with a custom chunking and semantic similarity scoring pipeline.
 - Deployed via Render (backend) and Vercel (frontend) as a publicly accessible production application with grounded citations to source material.

EDUCATION

Shri Ramswaroop Memorial University	Lucknow, India
<i>Bachelor of Computer Applications (BCA) — CGPA: 8.60/10</i>	<i>Graduated 2026</i>
MVM Inter College	Kanpur, India
<i>Intermediate, CBSE Board — 89.2%</i>	<i>2023</i>

ACHIEVEMENTS

- Won **National Level Debate Competition (MNCC)** — 2022
- Won **District Level Extempore Competition** — 2018
